

# SFC-3000-AIR-ATEX

## Portable Filtration Cart

The SFC-3000-Air-atex is a filtration cart designed to perform superbly within constant industrial or intermittent oil transfer applications. It offers high capacity alongside flexible filter element selection and easy element changeovers.

### Extensively specified into:

- Plant Hire
- Steel Production
- Manufacturing
- Automotive industry
- Paper Mills
- Off-Shore

## Introduction

The SFC-3000-AIR-ATEX is a rugged filtration cart designed for constant industrial or intermittent oil transfer use, and more heavy duty than its entry-level counterpart the Sentry. With two housings fitted onto the unit, the SFC-3000 boasts not only a large dirt holding capacity but also the option of staged filtration. This staged process will reduce the frequency you need to change your elements. The dual-filter design also means that you can introduce a water removal element, giving the option to remove both solid and water contamination in a single pass.

## Features

- /// Portable, perfect for mobile use
- /// Powerful flow rate options of 50 L/min Ideal for use with high viscosity oils
- /// Dual 9" Rugged frame with integral drip tray
- /// All terrain castor wheels
- /// Air operated
- /// Off-line contamination control

## Benefits

- /// Rugged design
- /// Small footprint
- /// 316 Stainless Steel construction
- /// Low cost consumables available in a range of micron ratings
- /// Increased dirt holding capacity
- /// Staged filtration possibilities to reduce element change out
- /// DP gauges to indicate when filters need changing
- /// Simple element changeover
- /// Perfect for replenishing systems with filtered oil and end of production line flushing
